

Wojskowa Akademia Techniczna im. Jarosława Dąbrowskiego

Programowanie współbieżne

Sprawozdanie z programu zaliczeniowego

Temat projektu: Stadion

Prowadzący: dr inż. Jarosław Rulka

Wykonał: Konrad Bobryk

Grupa: I5X3S1

Treść zadania

Grupa: **I5*S1**

Zadanie nr: **PW-30/2017**

Język implementacji: Java

Środowisko implementacyjne: **Eclipse, IntelliJ IDEA** Termin wykonania: **ostatnie zajęcia laboratoryjne**

Podstawowe wymagania:

- a. liczba procesów sekwencyjnych powinna być dobrana z wyczuciem tak, aby zachować czytelność interfejsu i jednocześnie umożliwić zobrazowanie reprezentatywnych przykładów,
- b. kod źródłowy programu musi być tak skonstruowany, aby można było "swobodnie" modyfikować liczbę procesów sekwencyjnych (za wyjątkiem zadań o ściśle określonej liczbie procesów),
- c. obok poprawnej identyfikacji sekcji krytycznych program musi brać pod uwagę czytelność i estetykę interfejsu użytkownika oraz zdolność percepcji osoby oceniającej,
- d. interfejs nie powinien opierać sie na zasadzie wypisywania kolejnych linii na ekran.

Sprawozdanie (w formie elektronicznej) powinno zawierać następujące elementy:

- 1) stronę tytułową,
- 2) niniejsza treść zadania,
- 3) syntetyczny opis problemu przyjęte założenia,
- 4) wykaz współdzielonych zasobów,
- 5) wykaz wyróżnionych sekcji krytycznych,
- 6) wykaz obiektów synchronizacji,
- 7) wykaz procesów sekwencyjnych,
- 8) listing programu.

Problem do rozwiązania:

Stadion.

Założenia.

Na stadionie piłkarskim rozegrany ma zostać mecz finałowy Ligi Mistrzów. Z uwagi na rangę imprezy ustalono następujące rygorystyczne zasady bezpieczeństwa.

- Na stadionie może przebywać maksymalnie K kibiców.
- Wejście na stadion możliwe będzie tylko po przejściu drobiazgowej kontroli, mającej zapobiec wnoszeniu przedmiotów niebezpiecznych.
- Kontrola przy wejściu jest przeprowadzana równolegle na 3 stanowiskach, na każdym z nich mogą znajdować się równocześnie maksymalnie 3 osoby.
- Jeśli kontrolowana jest więcej niż 1 osoba równocześnie na stanowisku, to należy zagwarantować, by byli to kibice tej samej drużyny.
- Kibic oczekujący na kontrolę może przepuścić w kolejce maksymalnie 5 innych kibiców. Dłuższe czekanie wywołuje jego frustrację i agresywne zachowanie, którego należy unikać za wszelką cenę.

Syntetyczny opis problemu – przyjęte założenia

Wypisane powyżej w treści zadania. Dodatkowo:

- kibice pojawiają się co pewien losowy czas;
- po pojawieniu się (które odbywa się poza panelem) kibic idzie w stronę kolejki;
- punkty kontrolne dążą do przyjęcia maksymalnej dopuszczalnej liczby kibiców na kontrolę (o ile jest to możliwe);
- rozpoczęcie kontroli następuje gdy ostatni z kibiców wziętych na kontrolę zajmie miejsce przy stanowisku kontrolnym;
- zarówno częstotliwość pojawiania się kibiców, jak i czas trwania kontroli na stanowiskach może być regulowany przez użytkownika w panelu "Opcje";
- punkty kontrolne przestają przyjmować kibiców, gdy suma kontrolowanych kibiców na wszystkich stanowiskach i kibiców wpuszczonych na stadion przekroczy maksymalną liczbę kibiców na stadionie;
- maksymalna liczba kibiców na stadionie może być modyfikowana w panelu "Opcje";
- kibice, którzy przepuścili kibiców przeciwnej drużyny, przechodzą do kolejki priorytetowej;
- punkty kontrolne zawsze najpierw biorą kibiców z kolejki priorytetowej, dopiero po jej opróżnieniu mogą znów zająć się kibicami w kolejce "głównej";
- nie może dojść do sytuacji, że w kolejce priorytetowej ktoś zostanie (oznaczałoby to, że kibic nie wszedł na stadion tylko dlatego, że przepuścił kibica przeciwnej drużyny, co byłoby niesprawiedliwe);
- punkty kontrolne wybierając kibiców do kontroli biorą pod uwagę kibiców z kolejki priorytetowej oraz tych z "głównej", którzy zajęli w niej swoje miejsce.

Wykaz współdzielonych zasobów

- kolejka kibiców;
- priorytetowa kolejka kibiców;
- liczba kibiców wpuszczonych na stadion.

Wykaz wyróżnionych sekcji krytycznych

- wybieranie kibiców na kontrolę;
- wpuszczanie kibiców na stadion (po przejściu kontroli).

Wykaz obiektów synchronizacji

- stanowiska kontrolne.

Wykaz procesów sekwencyjnych

- pojawianie się kibiców;
- funkcjonowanie stanowisk kontrolnych;
- proces główny (rysowanie).
